

## Vital Communities New Homes Project - Definitions and Data Collection Process

Completed in July 2022 for 2010 to 2021 Update.

Data collection performed by Olivia Uyizeye & Tim Josephson with the Upper Valley Lake Sunapee Regional Planning Commission.

### What is a New Home?

A new home is any housing unit addition that was not previously available on that parcel and is considered a built

### Permit Data

From State Databases on New Residential Construction Building Permits

### Housing Units placed into the following categories.

Multi	Multifamily - Apartment building, Triplex, Quadplex, Mixed Use
SFD	Single Family Dwelling - stand alone home
MF	Manufactured or Modular - trailer or mobile home
Duplex	Two family dwelling - common feasible conversion from SFD
Camp	Seasonal dwelling not identified as SFD by town
ADU	Apartment identified as ADU by town that is built with or added to SFD
Unk	No other data available from town

### Housing units noted as either new construction or conversion.

New	Where collection process allowed for replacements to be differentiated, these have been removed
Conversion	These include buildings that have been converted to housing from another use, moved from another location (mobile home), modified to allow more in existing structures, and rehabilitated where previously unlivable (tracked rarely).

### Data Collection Comments

Not all towns were able to provide a complete dataset, either within a certain year or of a certain type. This is due to a variety of reasons that include staff turnover, lack of required tracking method (e.g. no building permits required), or unavailable amount of time required by town or data collection team staff required to complete.

The following was the most common data collection process: A discussion of available data with municipal staff. Making a list of all potential new housing units from the building permit (BP) log (either by municipal or project staff). Cross referencing of the BP list with parcel/lister cards to confirm housing unit completion and to log available data.

It is significant to note that building permit logs are kept in various formats (e.g. handwritten, excel document), written by multiple staff, and may use different types of descriptive vocabulary to explain a BP's purpose. Therefore, it is possible that the list generated may have been incomplete. In addition, it is possible that new housing units (particularly conversions) were not counted where the BP was given prior to 2010. New construction was more broadly captured by many towns due to their ability to provide a report on structures built during a particular time period from the assessing database; However, this type of report did not allow for replacements to be identified.

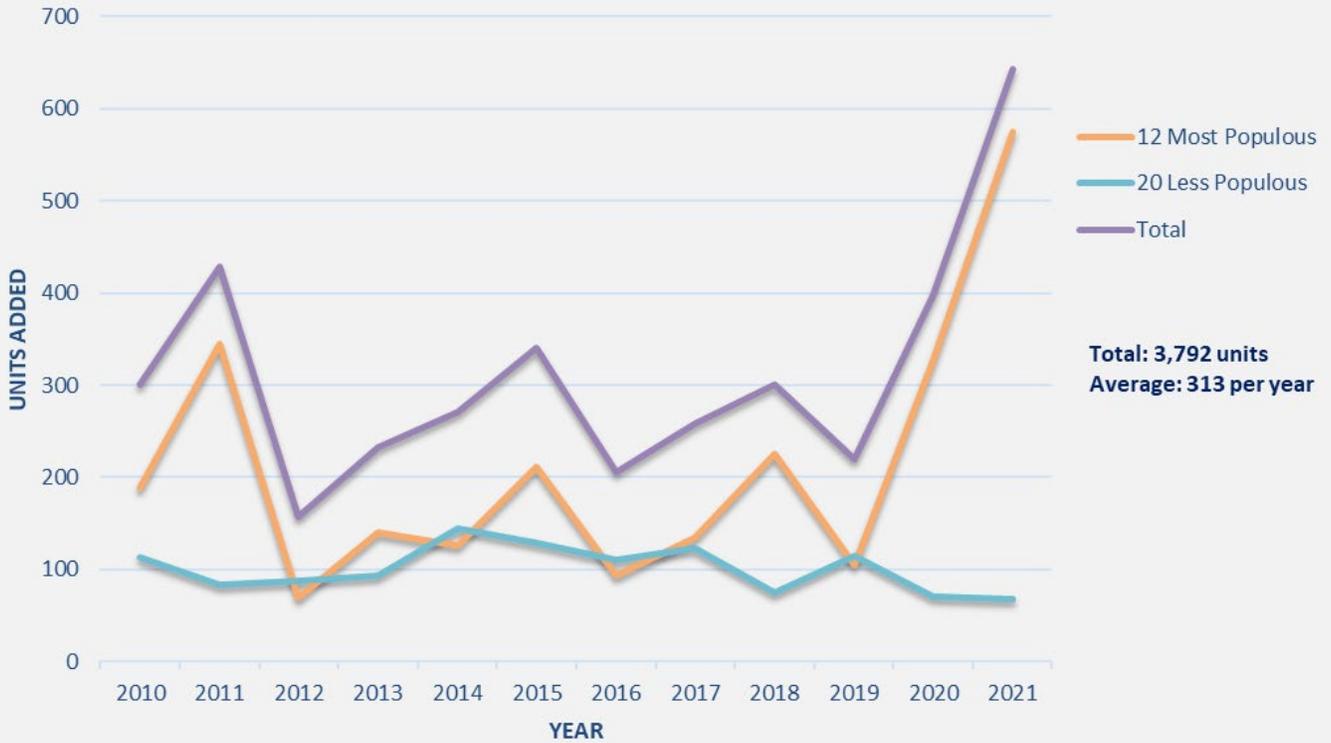

Notes on data collection techniques and tracking methods for each town are available.  
Student residences limited to only current students have not been counted.

2010 data is likely under due to 2009 permit lists not reviewed; However, those datum that received reports from the assessor's database would be accurate.

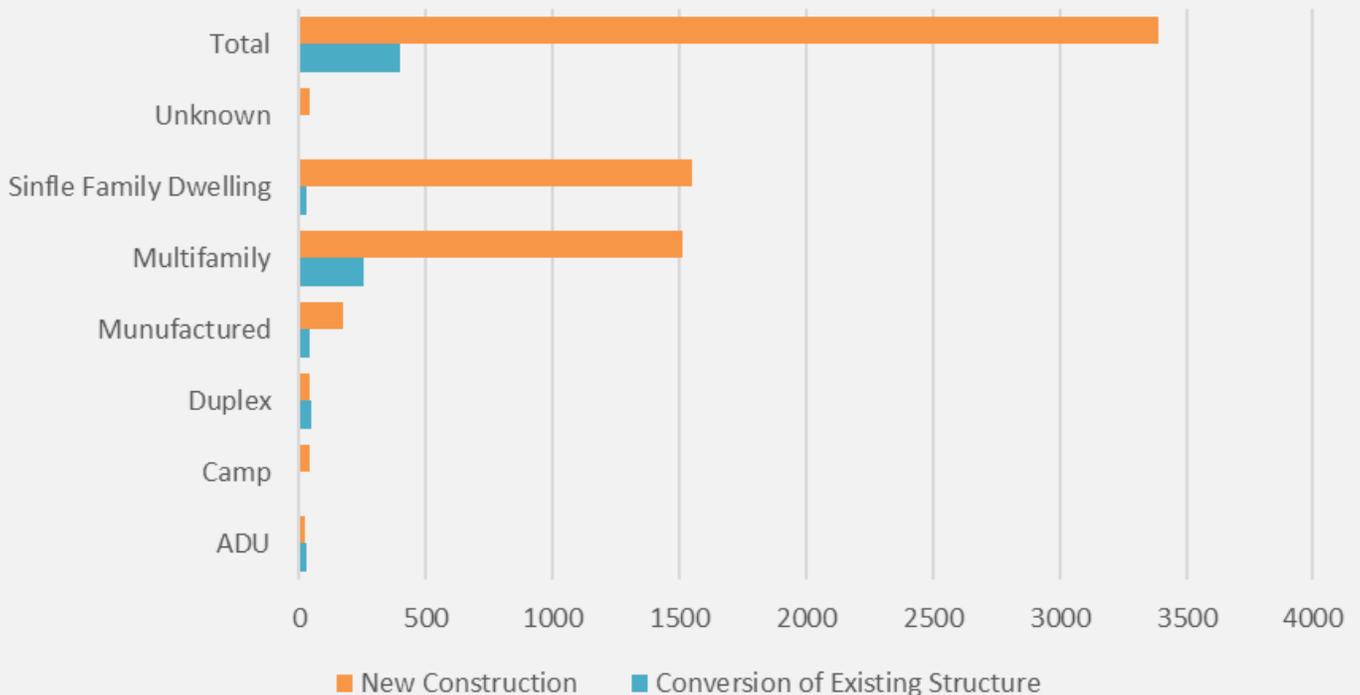

# New Homes in Our Communities 2010 to 2021

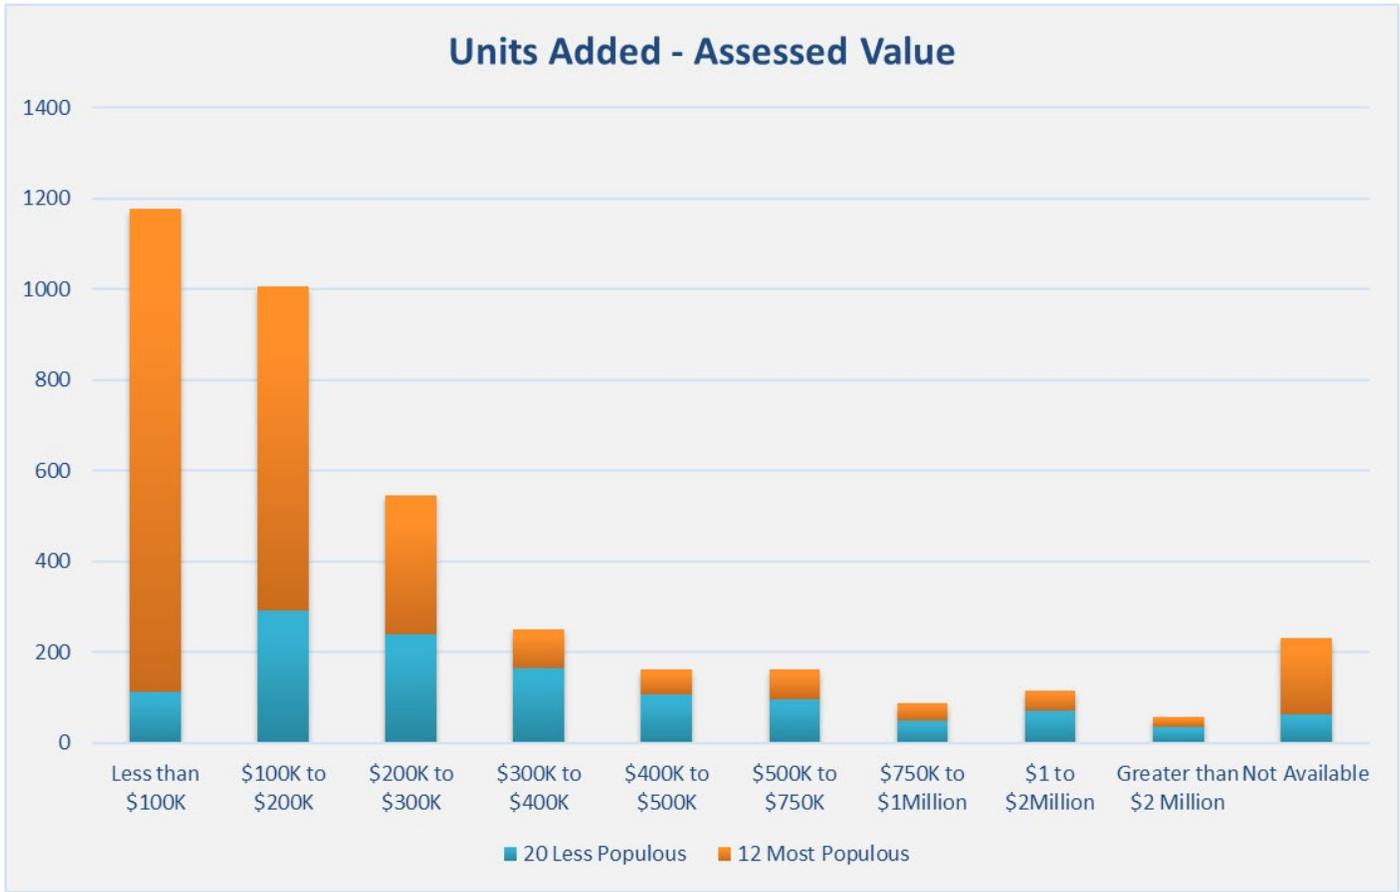

In the Vital Communities Service Area  
32 municipalities participated

### Units Added Each Year

### Units Added - Home Types

**Definition**

A new home, or place to live, is any housing unit addition that was not previously available on that parcel and is considered a built structure by municipal assessors or listers.

**How did we count new place to live?**

We started by discussing available data with municipal staff, then created a list of all potential new housing units from the building permit log (either by municipal or project staff). Where building permits are not done or a log unavailable, a report was produced from the municipal assessing department. That list was cross referenced with parcel/lister cards to confirm housing unit by the “year built”. Unit details were recorded. The final numbers were validated by staff in each community.

**In the Pipeline**  
 12 Most Populous: 1,591 units  
 20 Less Populous: 144 units
